2) Ahmed Mohammed Esmail
3) Ahmed Reda Abdullazeez
4) Ahmed Mustafa Anwar
5) Sara Amgad Abdullaleem
6) Christine Medhat Mounir

Application description:

This movie application is designed to provide users with a personalized and engaging way to explore films. When opening the app for the first time, users can create an account and select their favorite genres, ensuring a tailored experience from the start. The main page highlights the newest releases, top films of the year, and trending movies in the user's country, while the search page allows for easy discovery through filters, search history, and recommendations. Each film has its own detailed page featuring a thumbnail, description, cast information, ratings, and release date. To enhance user interaction, the app includes a wishlist for movies users want to watch and a saved films list for easy access later, all accessible from the profile page. The settings page allows customization with light or dark themes, language preferences (Arabic or English), and account management options. Overall, the app combines simplicity, personalization, and functionality to make film discovery and organization both enjoyable and convenient.
